

## **ONE HANDED, POP-UP CARGO MANAGEMENT SYSTEM**

### **ABSTRACT OF THE DISCLOSURE**

A cargo management system includes a bottom panel, a pair of top panels hingedly connected to the bottom panel, and a plurality of side panels hingedly connected to the bottom panel and the top panels. A plurality of rib members may be provided to divide the cargo management system into separate storage wells. Both the side panels and the rib members pop-up from the bottom panel when the cargo management system is placed from a collapsed position to a fully deployed position. The cargo management can be easily placed from the collapsed position to the fully deployed position by a single hand of the user by pulling one of the top panels toward the user.
